## Personal Statement

Researcher transitioning from cognitive psychology to counseling and clinical psychology, driven by a desire to connect scientific insight with human care. With a background in Life Science and Psychology, I have studied how emotion and context influence language processing, including two years at GIST's Language, Cognition, & Brain Lab and a cross-cultural study on urban green spaces during a Korea–Germany Junior Research Fellowship at KIT. My goal is to integrate rigorous empirical methods with compassionate practice, with a particular focus on LGBTQ+ identity and attachment patterns.
